PROFESSIONAL SUMMARY

Full-stack engineer with a UI/UX design background, building backends in Java 21 and Spring Boot 3 and typed frontends in React and TypeScript. Built a multi-tenant SaaS platform with strict tenant data isolation on PostgreSQL, plus JWT-secured full-stack apps with role-based access control. Frontend experience at Pan-Atlantic University. Based in Nigeria (UTC+1), available for remote contract or employer-of-record roles.

TECHNICAL SKILLS

Backend: Java 21, Spring Boot 3, Spring Security (JWT, role-based access control), REST APIs, Hibernate/JPA, PostgreSQL

Frontend: React, TypeScript, Tailwind CSS, mobile-first responsive design, component-driven UI

Design: Figma, wireframing, design systems

Tools: Git/GitHub, Docker, VS Code, IntelliJ, Slack, Zoom, Vercel

PROJECTS

Multi-Tenant SaaS Platform

GitHub: [repo link](#) · Live: [demo link](#)

Java 21, Spring Boot 3, PostgreSQL, React, TypeScript

- Built a shared-schema multi-tenant SaaS engine where all client workspaces share one PostgreSQL database and every request is scoped to its tenant.
- Isolated tenant data through dynamic, tenant-scoped query interfaces, designed so a query cannot return another workspace's rows.
- Containerised the services with Docker for reproducible local environments, backed by a pooled cloud PostgreSQL database in deployed environments.
- Deployed live on Vercel and documented the architecture, Dockerfiles and design decisions in a single monorepo case study.
- Built the React + TypeScript frontend on a reusable design system, drawing on my UI/UX background.

Task Manager (Full Stack)

Live: [demo link](#)

Java, Spring Boot, PostgreSQL, React, TypeScript

- Built a full-stack task management app: a Spring Boot REST API backed by PostgreSQL and a React + TypeScript client.
- Implemented stateless JWT authentication and role-based access control in a layered architecture (controller, service, repository) with Hibernate/JPA.
- Built a type-safe React frontend with protected routes, authenticated sessions, and create, edit and delete flows for tasks.

Finance Dashboard

Live: [demo link](#)

Java, Spring Boot, REST API, React, TypeScript, Tailwind CSS

- Built a responsive dashboard that consumes a Spring Boot REST API, with interactive charts and tables for financial data.
- Added an API-backed form for adding upcoming bills, and a mobile-first layout that works across desktop and mobile screens.

WORK EXPERIENCE

Frontend Developer Contract

Mar 2026 – Jun 2026

Pan-Atlantic University (PAU), Lagos Nigeria

- Built and maintained user interfaces in React, TypeScript and Tailwind CSS as part of a frontend team.
- Created reusable, component-based UI structures used across multiple pages that made the codebase easier to read and maintain.
- Worked with product designers and developers on consistent, self-contained component updates, reducing merge conflicts and regression risk.

EDUCATION

Diploma in Computer Science

Jan 2025 – April 2027 (expected)

Aptech Learning Institute, Nigeria
